Project Profile

EQUALITY FOR ALL FREEDOM OF WEALTH

WHAT IS THE SUPERDAO

The SUPERDAO community is a DAO concept community, with no power centralists, no interest centralists, and community members share community interests and are implemented by smart contracts. The SUPERDAO smart contract replaces the role of KOL in the traditional community, distributing power to each community member. Through voting governance, the community members jointly decide on community development to achieve "code autonomy". Therefore, the common interests of the community members determine the community interests.

01

Project Profile

EQUALITY FOR ALL FREEDOM OF WEALTH

Community role

Smart contract

Smart contracts are the only operating standard for all activities in the community. Including community construction RRC distribution, community vault management, voting resolution, incubation projects, etc., therefore, the SUPERDAO has no centralized managers, only community members and voting rights, to ensure the community operation by all members jointly decided.

Community members

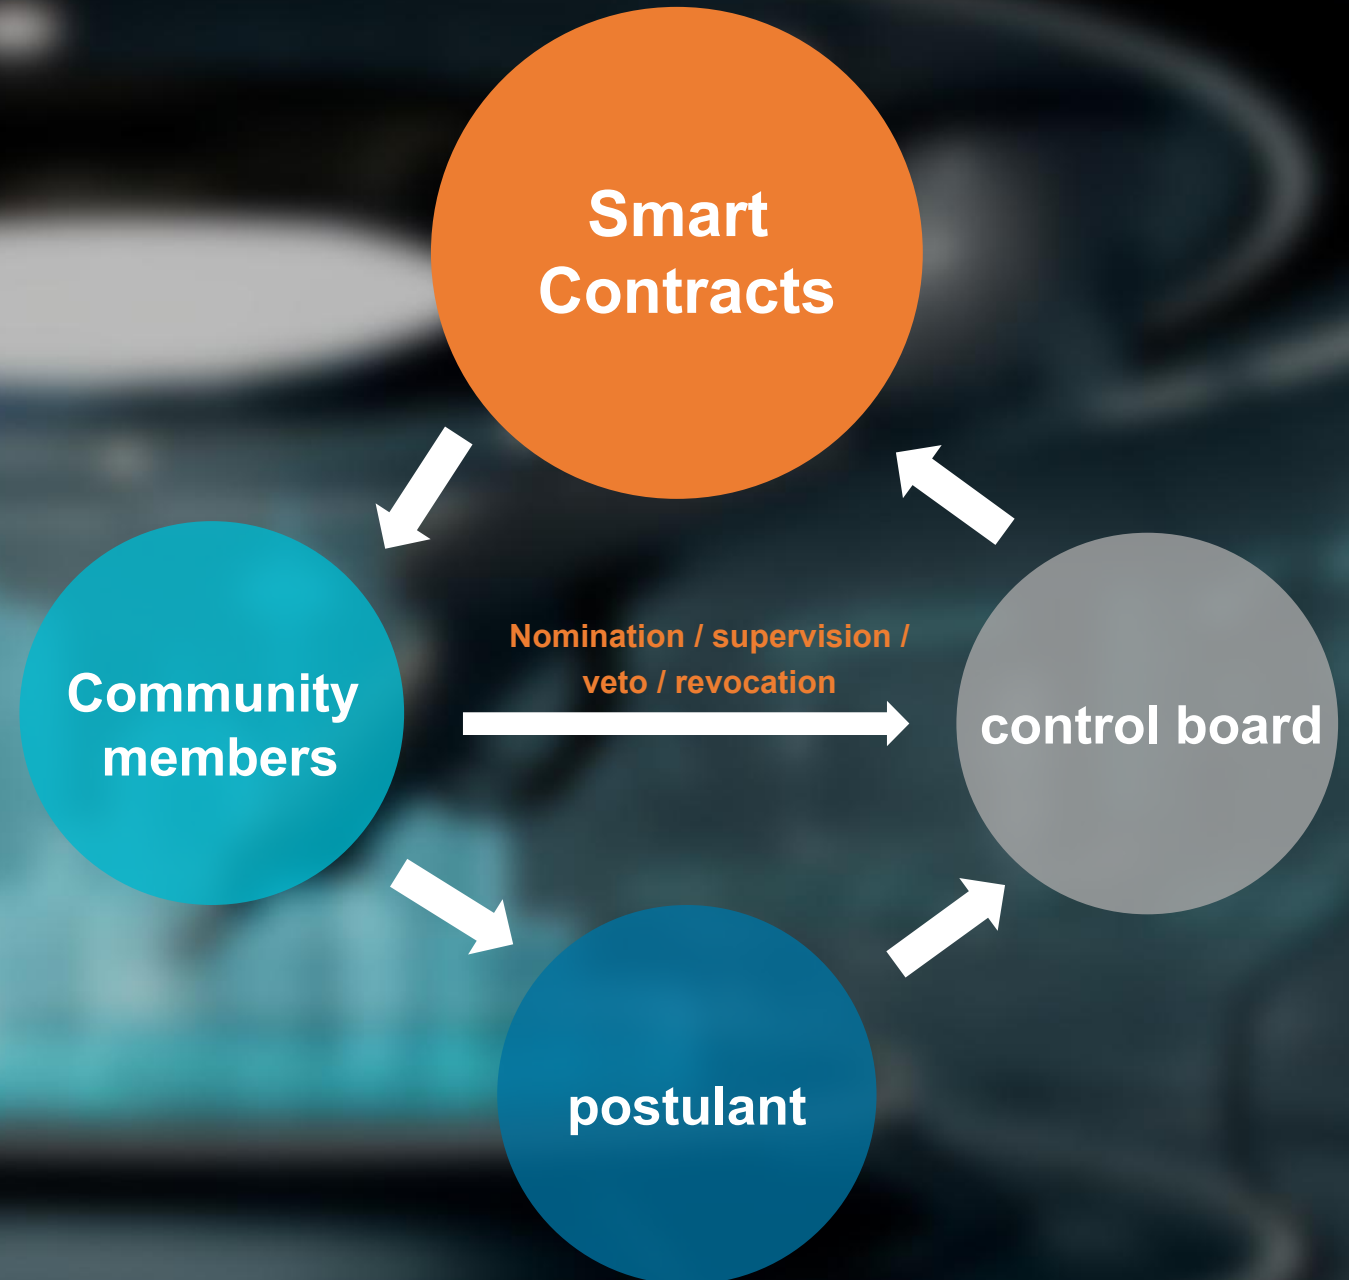

Community consensus makers and community development decision-makers. Get community RRC incentives by participating in community positions and participating in community building.

Postulant

Statistics of community RRC release data, review and submit to the Supervisory Commission.

Control board

Recommended by members, review the RRC distribution data, and publicized for a week, the publicity is uniformly issued by the intelligent RRC.

Project Profile

EQUALITY FOR ALL FREEDOM OF WEALTH

vision

To achieve "code autonomy" through smart contracts, no KOL, no project party, no giant whale, no power concentration, community / project decisions, proposals, rise and fall by all members of the community to truly achieve consensus-driven and equality for everyone

TOKEN MODEL

02

Tokens Models

Pass-Through Economy

Air cast candy

In the early stage to attract more consensus to join the construction of the community construction

rewards distributed

Through the distribution of community rewards, members are encouraged to actively participate in community construction and spread community consensus

Financing of Treasury

Community vault is managed communally by community members for investment/incubation projects

Into the bottom pool

The RRC goes into the bottom pool, which is funded by the community vault

The total amount of community pass (RRC) is 10 billion, managed by the community members through the multi-signature wallet Gnosis Safe, and any change of funds in the wallet needs to be voted by the community and approved by more than half of the wallet signatures to be effective, truly "consensus driven and equal for all".

RRC ACQUISITION&DISTRIBUTION

Token
economy

Access

Distribution
process

Token Economy

SUPERDAO has the only community card: RRC (everyone), every community users can actively participate in the community construction of SUPERDAO, and get the corresponding number of RRC, we separate community construction events, all users can according to their preferences to participate in different community construction, each plate has volunteers for special statistics and audit, intelligent contract will be issued monthly corresponding amount of RRC to participate in the construction of the user wallet.

RRC Acquisition / Distribution

RRC Acquisition/Issuance

Participate in community construction

- Active interaction in the community
- Hold relevant community positions
- Provide effective value information
- Provide effective feedback on the value information obtained
- Invite consensus partners to join the building
- Organize and launch community outreach activities

.....

20%

Raise the community vault

- Managing community coffers through Gnosis Safe
- Within a limited time of the income obtained (the start and end time is determined by the community vote), 30% will be retained in the community vault, and 70% will be paid to the whole network RRC account income dividend

30%

Participate in the secondary market

Open the secondary market trading, through the transaction to obtain the equity certificate

49%

Air cast candy

Distribute air drop candy to attract more users to participate in community construction and build consensus

1%

Distribution process

Volunteer statistics

Statistical review will be conducted by volunteers at the beginning of each month, including community construction / community active / volunteer salary / volunteer salary / community salary / media publicity / community formation, etc

Community members

During the community publicity period, all community members can raise objections until there is no dispute

control board

After the statistics of volunteers, the data will be integrated and reported to the supervisory committee, reviewed and approved by the committee for a one-week community publicity period

Smart contract

After the announcement is undisputed, the smart contract will be automatically transferred to the statistical account according to the announcement content

RRC VALUE

Wealth value

Power value

04 Token Value

Wealth value

Private
placement quota
of investment
projects

Having a community public certificate means to have the right of private equity amount of investment projects, and the private equity amount will be allocated according to the number of public certificates held.

For the projects voted by the community proposal, according to the contract and capital pool investment, the initial private equity amount of the project will be distributed according to the list of participants and the RRC proportion of the participants

Investment
project
dividend

The proceeds from the community investment project will be dividends according to the proportion of RRC holding the account

The community vault will invest in accordance with the smart contract, in a limited time income (through the community vote to start and end time), 30% retained community vault, 70% will be cut RRC account income dividends, personal dividends will be distributed according to the personal account RRC total RRC proportion

Community
RRC repo

In order to ensure that the active participation of the community construction gets the immediate return of the community builders, the community will regularly conduct RRC repurchase. The community voting will be held at the beginning of each month. After the voting, then the community vault will repurchase the RRC held by the community builders

RRC with monthly value of 100
RRC=1U

Transaction
on exchange

Consensus generates value

As the community expands. Expand the consensus, the token value will be higher and higher

04

RRC Value

EQUALITY FOR ALL FREEDOM OF WEALTH

Power value

Voting Rights

Voting right is the core value embodiment of SUPERDAO

Each RRC holder has the right to community governance, community construction of all decisions / proposals / review / investment / dividends / community construction RRC distribution need to vote and rely on the smart contract, all resolutions will be voted on the proposal, so that they can ensure that every member of the SUPERDAO can freely express their opinions to participate in the decision

RRC Management Rights

RRCs are jointly managed by community members, and through Gnosis Safe, all RRCs for community accounts need to pass more than half of the signatures before operations such as transfers can be made, which is the core concept of DAO.

Having an RRC is the basis for being a member of the community and having the right to manage the RRC

Community Position

Supervisory Commission: a certain level of consensus organizer
Token holders
Selection of community members

Volunteer: SUPERDAO concept consensus person

COMMUNITY PLATFORM

Platform

1. Quality projects need to give more attention and therefore need to buy RRC to advertise on the platform to increase exposure.
2. Some of the best projects tend to grow quickly, so they need to post tasks on the platform and recruit users to complete them.
3. Some projects can issue airdrops on the platform.

Dividend Distribution

1. The project issues ads & airdrops & tasks, etc. in the community platform, which requires the purchase of RRC, and this part of the income earned belongs to the platform dividends.
2. The dividends earned by the community platform will be distributed across the network based on the number of coins held in a single account.

As the consensus community continues to grow, so does the number of community members. At that time, the community will build a decentralized demand complex platform to meet the supply and demand relationship.

System Framework

Smart Contracts

Smart Contract

EQUALITY FOR ALL FREEDOM OF WEALTH

Code, autonomy

SUPERDAO smart contract is the cornerstone of the community to realize "voting resolution" and "code autonomy". It is the underlying code to protect community rights, interests and interests. It runs in the Etheric chain and currency security chain, and the miners provide operational support. No user or group can change the code content, and the smart contract will operate according to the algorithm. Smart contracts are the only operating standard for all activities in the community. Including community construction RRC distribution, community vault management, voting resolution, incubation projects, etc., therefore, the SUPERDAO has no centralized managers, only community members and voting rights, to ensure the community operation by all members jointly decided.
